UNRI INFORMATIONAL WEBCAST

A Threat to Our Water: Pharmaceuticals and Personal Care Products

URBAN NATURAL RESOURCES INSTITUTE

Please plan to join us for the first UNRI Informational Webcast for 2009. This series aims to bring you up to date on the latest tools, technologies and best practices related to urban natural resources management, arboriculture and urban planning. This year's first webcast will introduce an emerging topic that is becoming more known, as new research information and data is collected, analyzed and modeled. The session, "A Threat to Our Water: Pharmaceuticals and Personal Care Products," will introduce the issue of how the improper disposal of medications and personal care products by the public is leading to a serious threat to the quality and safety of public water supplies across the country.

Featuring speakers and scientists from The Lake Erie-Allegheny (LEA) Earth Force, LECOM School of Pharmacy and Penn State Erie Behrend College, this online session will examine the serious issues facing this newly recognized threat to watersheds, reservoirs and groundwater supplies. An introduction and overview of the problems associated with the use and disposal of pharmaceuticals will be presented, and a discussion of measures that can be taken to reduce their impact on water resources. This topic is receiving widespread attention, and this webcast will help to bring you up to date on the latest research and related guidelines and standards.

From the convenience of your own office or home computer, you can simply log into the webcast site to participate in this Informational webcast. The webcast will last approximately one-hour, and will include a Question & Answer period. For more information and login details, please visit www.unri.org/webcasts
